Software Engineer | 4 Years Experience | React, TypeScript, Accessibility | Node.js

Full Stack Software Engineer with expertise in React, TypeScript, Node.js, and REST APIs, building scalable web applications and end-to-end systems. Experienced in system design, performance optimization, and backend integration, with strong frontend depth.

Experience

Software Engineer 1A Officer, Bank of America

June 2022 - Present

- Designed and developed a scalable ATM monitoring system to track real-time transactions and device health across distributed systems.
- Built front-end applications using React and TypeScript, improving maintainability across 400+ screens through a component-based architecture.
- Enhanced and integrated RESTful APIs using Node.js and Express.js for transaction processing and system alerts.
- Defined API contracts and data flow, ensuring consistency and scalability across frontend and backend systems.
- Improved frontend performance by 20% through code splitting, lazy loading, and bundle optimization.
- Reduced unnecessary re-renders using memoization and optimized state updates.
- Built an AI-based defect triage system (Node.js + NLP), reducing manual effort by 35–45% and improving issue resolution time.
- Worked on backend logic for duplicate detection and similarity analysis, improving defect tracking efficiency.
- Created API virtualization services using Parasoft Virtualize and Groovy, reducing integration delays by 30%.
- Rapidly built a full-stack engineering dashboard using AI-assisted development tools, integrating multiple data sources and reducing manual reporting effort by 40%.
- Collaborated with cross-functional teams on system design, debugging, and production support.

Full Stack Web Development - Internship, Navrang Consultancy and Technologies

Feb 2021 – May 2021

- Delivered a React + Node.js Business Management MVP and built a cross-team testing automation tool, improving defect identification efficiency and reducing defect rates by 22%.

Technical Skills

- Languages and Frameworks/Libraries: JavaScript, TypeScript, Java, React, SQL, HTML5, CSS3, Component Architecture, State Management, Performance Optimization, Accessibility (WCAG), Node.js, Express.js, REST APIs, API Design
- Testing & Tooling: Git, Webpack, Chrome DevTools, Postman
- Other Skills: System Design, Data Structures, AI-assisted development

Education

Vellore Institute of Technology, Bachelor's in Computer Science Engineering: 9.09/10.0

April 2018-22

Key Systems and Impact

ATM Monitoring UI Platform: Designed a scalable system for real-time ATM transaction tracking across distributed systems, integrating front-end and backend to handle high-frequency data updates with improved reliability and performance.

AI-Based Defect Triage System: Built an NLP-based classification and similarity engine to automate defect triage and identify duplicate issues, improving engineering productivity and reducing manual effort.

API Virtualization: Built mock API services using Parasoft Virtualize to simulate backend dependencies, enabling independent testing, faster development cycles, and reduced integration blockers.

Engineering Metrics Dashboard (AI Assisted Development): Built a dashboard using AI-assisted tools to aggregate and visualize engineering metrics, integrating multiple data sources and reducing manual reporting effort by 40%.

Awards

- Innovation Challenge Finalist – for creative technical problem-solving.
- Technology-Focused Blog Contributor – for sharing internal learnings and best practices.
- Onshore Appreciation – for consistent high-quality code and early deliveries.
